Paper 3

CHEMISTRY – (Practical)

Dec. 2022 - 21/4 hours

Name	Index Number
Candidate's Signature	Date

Instructions to candidates

- (a) Write your name and index number in the spaces provided above.
- (b) Sign and write the date of examination in the spaces provided above.
- (c) Answer all the questions in the spaces provided in the question paper.
- (d) You are **not** allowed to start working with the apparatus for the first 15 minutes of the 2½ hours allowed for this paper. This time is to enable you to read the question paper and make sure you have all the chemicals and apparatus that you may need.
- (e) All working must be clearly shown where necessary.
- (f) KNEC mathematical tables and silent electronic calculators may be used.
- (g) This paper consists of 8 printed pages.
- (h) Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.
- (i) Candidates should answer the questions in English.

1.	(a)	You are	provided	with	the	following
	(4)	10u arc	provided	witti	uic	TOHO WINE

Solution A – Indicator solution
Solution B – 0.05 M compound B

• Solution C1 - Hydrochloric acid to be used in Questions 1(a) and 1(b)

You are required to determine the concentration in moles per litre of hydrochloric acid in solution C1.

PROCEDURE I (a)

- (i) Place two test tubes in a test tube rack. To the first test tube, place about 2 cm³ of solution B. To the second test tube, place about 2 cm³ of solution C1.
- (ii) Add 2 drops of indicator solution A to each of the test tubes, shake and note the colour of each solution. Record the colours in **Table 1**.

Table 1

Solution	Colour
Solution B + indicator solution A	
Solution C1 + indicator solution A	

(1 mark)

Complete the following statement:

PROCEDURE II (a)

- (i) Using a pipette and pipette filler, pipette 25.0 cm³ of **solution C1** into a 250 ml volumetric flask. Add distilled water to the mark. Label this as **solution C2**.
- (ii) Fill a burette with solution C2.
- (iii) Using a clean pipette and pipette filler, place 25.0 cm³ of **solution B** in a 250 ml
- (iv) Titrate solution B with solution C2 using 3 drops of indicator solution A. Record the results in Table 2.

(b)	You are provided with two portions of solid D and sodium hydrogen carbonate each
	weighing 2.5 g.

You are required to determine the heat of reaction of hydrochloric acid with $aqueou_S$ sodium hydrogen carbonate.

PROCEDURE I (b)

- (i) Using a 100 ml measuring cylinder, measure 30 cm³ of distilled water and place it in a 100 ml plastic beaker.
- (ii) Measure the temperature of the distilled water and record in **Table 3**.
- (iii) Add one of the portions of solid D to the water. Stir with the thermometer and measure the minimum temperature reached. Record the reading in Table 3.
